Thank you for your purchase. You have received a high quality hydraulic coupler that will increase a machine’s productivity and versatility by enabling the operator to quickly change from one attachment to another. If installed and maintained properly, it should provide years of service in a rugged environment.

This instruction manual describes the installation, operation, and maintenance for a Werk-Brau coupler. Please take the time to record the information listed below.

Serial No.:________________________________________________________
Model No.:________________________________________________________
Date Manufactured:_________________________________________________

**Coupler Introduction**

The coupler attaches onto various tools by “hooking” the front pin and then rotating a locking device under the rear pin of the attachment. The lock is self-adjusting, so no adjustments are needed. While engaged, the lock is securely held in place by the cylinder and dual extension springs. The Werk-Brau coupler is equipped with a set of powerful tension springs in addition to hydraulic cylinder. In the event of hydraulic failure the coupler’s safety lock will enable the coupler to hold the attachment. To disengage, remove safety pin and the operator simply sets the attachment on the ground and uses a switch installed in the cab. After engaging lock manually install safety pin and retaining device (lynch pin). Safety pin must be installed at all times during use of the coupler. The safety pin is mandatory and serves two purposes. First, once installed it insures the operator that the lock is in fact properly seated under the pin. The safety pin can not be installed if the lock is only partially engaged. Second, it will prohibit inadvertent disengagement.

**NOTE:** Pictures and diagrams thru out this manual may not be your exact Werk-Brau coupler. The pictures represent an action or a setup.
Safety Statement Guide

 estados de peligro usados en situaciones de peligro donde un inmediato peligro presenta una amenaza de muerte o lesión grave para el operador y cualquier otro que esté cerca.

 Estado de advertencia: Usado para representar un nivel de peligro entre “Cauteloso” y “Peligroso”, en lugar de la etiqueta requerida “Cauteloso” con una palabra de advertencia “Advertencia”, siempre y cuando tengan un salto de palabra de “Advertencia”, una adecuada respuesta de mensaje.

 Estado de precaución: Usado en situaciones de peligro menores donde un peligro inmediato o potencial no inmediato o práctica insegura presenta una menor amenaza de lesión.

 Etiqueta de notificación: Se utiliza donde el equipo o daño de propiedad podría resultar si las instrucciones no son seguidas correctamente.

 Este símbolo por sí solo o utilizado con un salto de palabra de seguridad a lo largo de este manual se utiliza para llamar tu atención a instrucciones que implican tu seguridad personal o la seguridad de otros. Fallo en seguir estas instrucciones puede resultar en lesión o muerte.

General Safety Precautions

LEA EL MANUAL ANTES DE LA INSTALACIÓN

La instalación, operación o mantenimiento incorrectos de este equipo podría resultar en lesión grave o mortal. Los operadores y el personal de mantenimiento deben leer este manual así como todos los manuales relacionados con este equipo y la máquina operativa antes de comenzar la instalación, operación o mantenimiento. SIGA TODAS LAS INSTRUCCIONES DE SEGURIDAD EN ESTE MANUAL Y EL MANUAL DE MAQUINAS OPERADORAS.

LEA Y ENTENDA TODAS LAS INSTRUCCIONES DE SEGURIDAD

Lea todas las etiquetas de seguridad y las declaraciones de seguridad en todos los manuales antes de operar o trabajar en este equipo. Conozca y cumpla con todas las regulaciones OSHA, leyes locales y otras guías de profesionales para su operación. Conozca y siga buenas prácticas de trabajo cuando ensamblen, mantengan, reparen, monten, retiren o operen este equipo.

CONOSCE SU EQUIPO

Conoce las características, dimensiones y operaciones de tu equipo antes de operarlo. Visúe inspecte su equipo antes de comenzar a operarlo, y nunca opere equipo que no esté en óptimas condiciones con todos los dispositivos de seguridad intactos. Revise todo el hardware para asegurarse que esté bien ajustado. Asegúrese de que todos los pasadores, ganchos, y dispositivos de conexión se encuentren correctamente instalados y asegurados. Remueva y reemplace cualquier parte dañada, fatigada o extremadamente desgastada. Asegúrese de que todas las etiquetas de seguridad estén en su lugar y sean legibles. Mantenga las etiquetas limpias, y reemplácelas si se vuelven difíciles de leer.

PROTEJASE CONTRA EL DEBRIS VOLANTE

Siempre use gafas de seguridad, gafas de seguridad con una protección facial cuando empuñen clavos o cuando cualquier operación cause polvo, fragmentos volantes, o cualquier otro material peligroso.

BAJE O SOSTENGA EL EQUIPOLEVANTADO

No trabaje bajo el equipo levantado sin apoyarla. No use material de apoyo hecho de bloques de concreto, árboles, cestas, barriles ni cualquier otro material que pueda colapsar o cambiar de posición. Asegúrese de que el material de apoyo esté sólido, no decayo, distorsionado, o cilíndrico. Baje los brazos y los dispositivos de fijación a la posición del suelo o sobre el bloque(s).

OPERACIÓN BAJO EL MÁQUINA OPERADORAS
USE CARE WITH HYDRAULIC FLUID PRESSURE

Hydraulic fluid under pressure can penetrate the skin and cause serious injury or death. Hydraulic leaks under pressure may not be visible. Before connecting or disconnecting hydraulic hoses, read your operating machines operator’s manual for detailed instructions on connecting and disconnecting hydraulic hoses or fittings.

- Keep unprotected body parts, such as face, eyes, and arms as far away as possible from a suspected leak. Flesh injected with hydraulic fluid may develop gangrene or other permanent disabilities. Wear safety glasses, protective clothing, and use a sound piece of cardboard or wood when searching for hydraulic leaks. DO NOT USE YOUR HANDS!
- If injured by injected fluid, see a doctor at once. If your doctor is not familiar with this type of injury, ask him to research immediately to determine proper treatment.

DO NOT MODIFY MACHINE OR ATTACHMENTS

Modifications may weaken the integrity of the attachment and may impair the function, safety, life and performance of the attachment. When making repairs, use only the manufacturer’s genuine parts, following authorized instructions. Other parts may be substandard in fit and quality. For loaders, never modify any ROPS (Roll Over Protection System) equipment or device.

!!!Any modifications must be authorized in writing by the Werk-Brau or the manufacturer!!!

SAFELY OPERATE THE EQUIPMENT

Do not operate equipment until you are completely trained by a qualified operator in how to use the controls, know its capabilities, dimensions, and all safety requirements. See your operating machines manual for these instructions.

- Keep all step plates, grab bars, pedals, and controls free of dirt, grease, debris, and oil.
- Be sure that all bystanders are out of harms way when operating.
- Do not allow riders on the attachment or operating machine.
- Do not operate the equipment from anywhere other than the correct operators position.
- Never leave equipment unattended with the engine running or with this attachment in a raised position.
- Do not alter or remove any safety feature from the operating machine or this attachment.
- Know your work site safety rules as well as traffic rules and flow. When in doubt on any safety issue, contact your supervisor or safety coordinator for an explanation.

SAFELY MAINTAIN AND REPAIR EQUIPMENT

- Do not wear loose clothing, or any accessories that can catch in moving parts. If you have long hair, cover or secure it so that it does not become entangled in the equipment.
- Work on a level surface in a well-lit area.
- Use properly grounded electrical outlets and tools.
- Use the correct tool for the job at hand. Make sure tools are in good condition.
- Wear all protective equipment specified by the tool manufacturer.
OPERATING PRECAUTIONS

WARNING
DO NOT IMPROPERLY USE COUPLER
This coupler is designed to couple attachments and not for any other use.

DANGER
BE AWARE OF SURROUNDING UTILITIES
Operator must be aware of all utility line and overhead electrical lines. Operations must be able to clear all lines safely.

NOTICE
BE AWARE OF OVERHEAD DANGER
Operator must be aware of all possible overhead dangers that are within the range of motion of the operating machine.

WARNING
DO NOT OPERATE WITH A LOOSE ATTACHMENT
Visually check the coupler to verify attachments are secure and lock is fully engaged and that the center to center of the attachment matches the up with the coupler.

WARNING
PINCH POINTS
Personal injury could result from the careless misuse of this coupler. Keep hands and body parts clear of the coupler when it’s in the process of hooking up to an attachment. Be sure the machine is off and the attachment is on the ground prior to making adjustments.

NOTICE
COUPLER EXTENDS TIP RADIUS
Notice adding a coupler to machine extends the tip radius. This can cause clearance issues on some machines making it possible for a coupled attachment to come into contact with the machine causing damage.

SAFETY PIN NOTICE

Werk-Brau has approved of the following safety retaining pins for use with all Werk-Brau couplers. Pins vary in size, please use the appropriate size approved safety pin on all couplers. Please only use the approved safety pins shown below.

Standard Variable Pin
Part # 00161397 (Above)

Half Inch Pin
Part # EZG025RLP (Above)
Hydraulic Coupler  SLHYDQC

*Apply enough pipe sealer to contact all threads.

**Do not use that excess will squeeze into the hydraulic lines.

COUPLER INSTALLATION

Un-package the coupler from the shipping skid, remove attaching pins and orient the coupler so that the open mouth of the coupler is towards the machine.

1. Position and align the stick with the front bore on the coupler and install the machine’s original front attaching pin. Do the same with the attachment link and install the original rear pin.
2. Install the pins provided with the coupler, into the attachment.
3. Secure and retain all pins.

IMPORTANT: Set the bucket on the ground and rotate in a dumping motion until the tracks come off the ground to check that the coupler has positively connected to the bucket. Do this every time attachment is changed.

HYDRAULIC AND ELECTRICAL INSTALLATION

Please see the attached Quick-Coupler Lock Kit Installation Instruction.

DO NOT OVER EXTEND LOCK

If safety pin is in, lock has been added to lock and you may need a new spring due to over expansion of spring.

Use OEM Pins to attach coupler

Use OEM Pins to securely attach the coupler.
CONNECTING TO AN ATTACHMENT

1. Put switch in “unlock” or “release” position (a couple of seconds till switch beeps) until the lock is fully disengaged.

2. Position the front hooks of the coupler over the front in of the attachment and curl the coupler so that the rear hooks of the coupler go over the rear pin of the attachment. Continue to curl the coupler and attachment so that the weight of the attachment is on the coupler. Do not lift the attachment unsafely off the ground until the lock is engaged and safety pin is installed with lynch pin.

3. Put switch in “lock” or “engaged” position and wait for several seconds for the lock to engage. **Now install locking pin with lynch pin in the rear of the coupler.**

**WARNING** The switch is to remain in the “lock” or “engaged” (indicated by the green light on the switch) at all times while machine is in operation.

**IMPORTANT:** 1st visually and 2nd mechanically verify that attachment is connected properly. **Visually** check that the lock is properly “cupping” the rear pin and also that the safety pin installed and retained with lynch pin (see figure: safety pin installed). **Mechanically** inspect by setting the attachment on the ground and rotate in a dumping motion until the tracks come off the ground to check that the coupler has positively connected to the attachment….

**DO THIS EVERY TIME AN ATTACHMENT IS CHANGED.**

For most applications, the lock pin can be seen from the cab by rotating the attachment to the full dump position. Do this only when you are sure that all by standers are clear and at a safe distance.
RELEASEING AN ATTACHMENT

Rotate attachment in full curl position as far as possible, remove lynch pin and remove safety pin (See figure below). Put switch in “unlock” or “disengage” position. Be sure to have the attachment is clear from by-standers and on the ground prior to “releasing” the attachment. And will “hold” the coupler in the disengaged position while moving from one attachment to another. DO NOT OPERATE COUPLER IN THIS POSITION. Rotate attachment outward. Allow it to release from coupler.
STICKERS

Placement of the Warning/Caution Decal
Place the warning/caution decal in the cab in close proximity to the coupler engaging switch. This will act as a safety reminder for the operator to double check and ensure that the coupler’s correctly hooked up to the attachment or attachment.

SPRING ADJUSTMENTMENT AND REPLACEMENT

Inspect coupler occasionally to ensure years of rugged service. There is a grease-zerk located on the lock. Grease as needed. With the proper servicing and adjustment, your Werk-Brau coupler should last years to come.

The following list below should be followed in order to lengthen the life of your WERK-BRAU product.

Trouble Shooting

Problem #1
Locking mechanism will not retract.
Cause/ Corrective Action
A.) Foreign debris have caused locking mechanism to bind.
B.) Safety pin is engaged - remove safety pin and lynch pin.

Problem #2
Lock will not engage properly.
Cause/ Corrective Action
A.) Foreign debris have caused locking mechanism to bind.
B.) Verify that the attachment pin centers match that of the coupler.
C.) Verify that the coupler is not contacting the attachment

Should you require any assistance or technical support installation assistance available by calling: 1-800-537-9561
Note: This Safety and Health Information Bulletin (SHIB) updates the "Revision of the Unintended Release of Buckets from Quick Couplers on Hydraulic Excavators" SHIB that was issued on August 26, 2004.

This Safety and Health Information Bulletin is not a standard or regulation, and it creates no new legal obligations. The Bulletin is advisory in nature, informational in content, and is intended to assist employers in providing a safe and healthful workplace. Pursuant to the Occupational Safety and Health Act, employers must comply with hazard-specific safety and health standards promulgated by OSHA or by a state with an OSHA-approved state plan. In addition, pursuant to Section 5(a)(1), the General Duty Clause of the Act, employers must provide their employees with a workplace free from recognized hazards likely to cause death or serious physical harm. Employers can be cited for violating the General Duty Clause if there is a recognized hazard and they do not take reasonable steps to prevent or abate the hazard. However, failure to implement any recommendations in this Safety and Health Information Bulletin is not, in itself, a violation of the General Duty Clause. Citations can only be based on standards, regulations, and the General Duty Clause.

Preface
Following a fatal accident caused by the unexpected release of an excavator bucket from a quick coupling device on a hydraulic excavator, the Occupational Safety and Health Administration (OSHA) reviewed its Integrated Management Information System (IMIS) accident data. The accident data revealed 15 incidents since January 1998 involving the unanticipated release of excavator buckets from quick couplers on hydraulic excavators. Of the fifteen accidents reported by Federal and state OSHA offices, eight resulted in employee fatalities.

Purpose
The purpose of this Safety and Health Information Bulletin (SHIB) is to:

- Alert employers and employees of the need to follow manufacturer instructions regarding the installation, use, testing, inspection, and maintenance of quick coupling devices;
- Explain how buckets and other attachments can be unintentionally released from quick couplers; and
- Detail actions to prevent such unintended releases.

Background
The OSHA Madison, Wisconsin Area Office investigated a fatal accident where an excavator bucket was released unexpectedly from a quick coupler. OSHA’s statistical database revealed fourteen additional incidents within the last six years involving the use of this type of equipment where excavator buckets unexpectedly released from quick couplers. Of the fifteen accidents reported by Federal and state OSHA offices, eight resulted in employee fatalities.

Accident Description
The accident prompting this Safety and Health Information Bulletin occurred at a site where a contractor was installing water mains and laterals. An excavation for a lateral had just been dug and an employee entered that lateral to prepare to install the pipe. The excavator operator changed buckets using a quick coupler on the hydraulic excavator. When the excavator was swung to continue digging on the main line, the bucket became detached from the quick coupler and rolled/slid into the lateral excavation, striking the employee and killing him. The investigation revealed that a locking pin had not been manually installed on this coupler to prevent accidental release of this attachment.
Quick Couplers
Most quick couplers are after-market devices that have been used on hydraulic excavators for several years and have steadily increased in popularity. They enable contractors to quickly make attachment changes on hydraulic excavators. Most quick couplers have a lifting eye to use for lifting material. (Figure 1).

By removing the bucket (Figure 2), the lifting capacity of the excavator is increased by the weight of the bucket. Additionally, removal of the bucket improves the excavator operator’s line of vision during lifting.

Many contractors like to use a large bucket to do the bulk of the digging and to then change to a smaller bucket for fine tuning and working in tight areas. The quick couplers also allow the operator to change from a bucket attachment to various other attachments. In most cases, the unexpected releases of buckets and other attachments are likely caused by the failure to properly engage and lock the quick couplers. (Figures 3 & 4).

Other Information
Quick couplers are made by various manufacturers. Manufacturers of quick couplers have recognized the hazard of the bucket or other attachments being unexpectedly released from the quick couplers and, in many cases, have provided users with a retrofit locking pin (Figures 5 & 6) which is manually inserted behind the front lever (stick pin) or rear lever (link pin) of the couplers to prevent unintended releases.
The National Institute for Occupational Safety and Health also has studied the hazards associated with hydraulic excavators and has issued DHHS Publication No. 2004-107 entitled, "Preventing Injuries When Working with Hydraulic Excavators and Backhoe Loaders". This publication addresses the hazard of excavator buckets being unintentionally detached from a quick disconnect mechanism.

Conclusions
Based upon experience, many manufacturers have retrofitted existing quick couplers, designed new and improved quick coupler systems, and developed safe use and operating procedures. Overall, these corrective actions have significantly decreased the probability of a bucket or other attachment being unintentionally released from a quick coupler. However, unintended releases of buckets and other attachments from quick couplers continue as evidenced by the fatal accident in Madison, Wisconsin and the IMIS accident data. Unintended releases appear to continue because: not all employers/contractors who use quick couplers are aware of the hazard and of the manufacturers’ corrective actions; some users fail to retrofit the quick coupler with locking pins; and/or some users have insufficient training on installation and testing procedures associated with the use of such couplers. Given the number of manufacturers and the diversity of quick coupling devices, employers using quick couplers should contact the manufacturer if they have questions regarding the reliability of the quick coupling devices, or to determine whether additional steps or modifications are recommended in order for employees to safely use a particular quick coupling device.

Safety Measures to Prevent Accidents
Employers using hydraulic excavators with quick coupling devices can protect employees from the unintended release of attachments by:

- Inspecting all quick couplers to determine if they are subject to unexpected release hazards. Determine whether a manually installed locking pin and installation procedures (or other retrofitting methods) have been provided by the manufacturer.
- If appropriate, obtaining and installing retrofits recommended by the manufacturer, including positive locking pins and other devices that need to be manually installed.
- Using an independent secondary system to retain the bucket/work tool from falling, in the event of a failure of the primary system. The secondary system can be manual or automatic with a verification procedure for the user to check for proper attachment.
- Considering the use of newer models of quick couplers that have been specifically designed to prevent the unintended release of attachments.
- Following the manufacturer’s recommendations for maintenance and inspection of the quick coupler to prevent a malfunction of the quick coupler that could cause an unintended release of the attachments.
- Following the manufacturer’s installation procedures and recommendations for using and testing quick coupler devices and 4 attachment connections whenever an attachment is made.
- Training employees in: the proper use of quick couplers; making visual inspections; procedures for engaging attachments; and methods for testing connections.
- Requiring employees to use the proper procedures for engaging excavation attachments and incorporating the procedures into the company’s safety and health program.

ABOUT WERK-BRAU

Since 1947, Werk-Brau has manufactured the highest quality and most innovative specialty products for the heavy equipment industry. Werk-Brau is respected internationally for providing outstanding customer service and being dedicated to excellence in all aspects of our business. Duke Werkheiser and Dutch Brautigan, for whom the company is named after, first opened their blacksmith shop in Findlay Ohio. Still today Werk-Brau manufactures and produces in Findlay Ohio, in a state of the art facility.

Over the decades Werk-Brau has grown and become so much more than a simple blacksmith operation. Today Werk-Brau proudly employs an industry leading team of professionals who work hard to follow the vision set by the founders of Werk-Brau to “Provide Excellence in Customer Service”. As a modern company Werk-Brau is efficient, high-tech, dedicated to its customers, and deeply proud of the quality of products manufactured.

Werk-Brau manufactures a complete line of O.E.M. and replacement attachments for excavators, mini excavators, backhoes, skid steers, mini and full size loaders and crawler loaders. All over the world Werk-Brau attachments can be found hard at work in the toughest of conditions.

THANK YOU FOR YOUR PURCHASE!

WORK SAFE!
